[illegible]

```
* @returns Whether head pose is within acceptable range for rPPG
*/
export function isHeadPoseAcceptable(landmarks: NormalizedLandmark[]): boolean {
// Left and right outer eye corners
const leftEye = landmarks[33];
const rightEye = landmarks[263];

// Z-depth difference indicates yaw rotation
// MediaPipe z is negative when landmark is behind the face plane
const yawProxy = Math.abs(leftEye.z - rightEye.z);

// Empirically tuned threshold: yaw > ~25° typically causes ROI degradation
return yawProxy < 0.15;
}
```
